Module 2 Cheat Sheet - Introduction to Linux Commands

Setting information
Return your user name:
whoami
Return your user and group id:
id
Return operating system name, username, and other info:
uname -a
Display reference manual for a command:
man top
.ist available man pages, including a brief description for each command:
man -k .
Calledon and an annual (for an analy)
Get help on any command (for eg: curl): curlhelp

about:blank 1/9

This provides a brief overview of the curl command's usage and options.

Return the curren	date and time:		
date			
Navigating a	nd working with directories		
List files and direc	tories by date, newest to last:		
ls -lrt	• /		
13 -11 (
Find files in direct	ory tree that end in .sh:		
find -nam	e "*.sh"		
Return path to pre	sent working directory:		
pwd			
Make a new direct			
mkdir new	_folder		
Change the curren	t directory:		
Up one le			
cd/	CI.		
,			

about:blank 2/9

	To home:
	cd ~` or `cd
	To some other directory: cd path_to_directory
Remo	ve directory verbosely:
	rmdir temp_directory -v
	This compact cooky v
Mon	itoring system performance and status
Lietes	lection of/all running processes and their PIDs:
List se	
	ps — — — — — — — — — — — — — — — — — — —
	ps -e
Displa	y resource usage:
	top
List m	ounted file systems and usage:
	df
Crea	ating, copying, moving, and deleting files:

Create an empty file or update existing file's timestamp:

```
touch a_new_file.txt
```

Copy a file:

```
cp file.txt new_path/new_name.txt
```

Change file name or path:

```
mv this_file.txt that_path/that_file.txt
```

Remove a file verbosely:

```
rm this_old_file.txt -v
```

Working with file permissions

Change/modify file permissions to 'execute' for all users:

```
chmod +x my_script.sh
```

Change/modify file permissions to 'execute' only for you, the current user:

```
chmod u+x my_file.txt
```

Remove 'read' permissions from group and other users:

```
chmod go-r
```

about:blank 4/9

spiaying Display file contents: cat my_shell_script.sh Display file contents page-by-page: more ReadMe.txt Display first 10 lines of file: head -10 data_table.csv Display last 10 lines of file: tail -10 data_table.csv Display string or variable value: echo "I am not a robot" echo "I am \$USERNAME"

Basic text wrangling

Sorting lines and dropping duplicates:

Sort and display lines of file alphanumerically:

sort text_file.txt

6/6/25, 12:30 PM about:blank

In reverse order:

```
sort -r text_file.txt
```

Drop consecutive duplicated lines and display result:

```
{\tt uniq\ list\_with\_duplicated\_lines.txt}
```

Displaying basic stats:

Display the count of lines, words, or characters in a file:

Lines:

```
wc -l table_of_data.csv
```

Words:

```
wc -w my_essay.txt
```

Characters:

```
wc -m some_document.txt
```

Extracting lines of text containing a pattern:

Some frequently used options for grep:

Option	Description
-n	Print line numbers along with matching lines

about:blank 6/9

6/6/25, 12:30 PM about:blank

Option	Description	
-c	Get the count of matching lines	
-i	Ignore the case of the text while matching	
-v	Print all lines which do not contain the pattern	
-W	Match only if the pattern matches whole words	

Extract lines containing the word "hello", case insensitive and whole words only:

```
grep -iw hello a_bunch_of_hellos.txt
```

 $\textbf{Extract lines containing the pattern "hello" from all files in the current directory ending in .txt:\\$

```
grep -l hello *.txt
```

Merge two or more files line-by-line, aligned as columns:

Suppose you have three files containing the first and last names of your customers, plus their phone numbers.

Use paste to align file contents into a Tab-delimited table, one row for each customer:

```
paste first_name.txt last_name.txt phone_number.txt
```

Use a comma as a delimiter instead of the default Tab delimiter:

```
paste -d "," first_name.txt last_name.txt phone_number.txt
```

Use the cut command to extract a column from a table-like file:

Suppose you have a text file whos rows consist of first and last names of customers, delimited by a comma.

Extract first names, line-by-line:

```
cut -d "," -f 1 names.csv
```

cut -b 2-5 my_text_file.txt

Extract the characters (bytes) from each line of a file, starting from the 10th byte to the end of the line:

```
cut -b 10- my_text_file.txt
```

Compression and archiving

Archive a set of files:

```
tar -cvf my_archive.tar.gz file1 file2 file3
```

Compress a set of files:

```
zip my_zipped_files.zip file1 file2
zip my_zipped_folders.zip directory1 directory2
```

Extract files from a compressed zip archive:

```
unzip my_zipped_file.zip
unzip my_zipped_file.zip -d extract_to_this_direcory
```

Working with networking commands

Print hostname:

hostname

Send packets to URL and print response:

ping www.google.com

Display or configure system network interfaces:

iŗ

Display contents of file at a URL:

curl <url>

Download file from a URL:

wget <url>
